Abstract

Modern precision medicine takes microscopic molecules, genes, cells, and targeted interventions as its core paradigm. It has achieved remarkable results in the treatment of acute organic diseases, traumas, infections, and some tumors. However, it commonly faces limitations such as treating symptoms rather than root causes, high recurrence rates, and lack of holistic regulation in chronic metabolic diseases, functional diseases, psychosomatic diseases, and complex chronic disease management. Based on the Unified Theory of Cosmic Minimum Matter Units, this paper proposes the Life Conduction System Theory: the human body is not a mechanical combination of organs and cells, but an integrated life carrier centered on the unified conduction of matter–energy–information. The essence of disease is not local target abnormality, but the external manifestation of blocked overall conduction pathways and imbalanced energy homeostasis.

This paper demonstrates that observation and intervention tools cannot surpass the material basis of their own composition, just as “the eye cannot directly observe the original structure of the eye itself”. The existing human technical system is logically incapable of directly observing the minimum matter unit of the universe. Therefore, medicine should not infinitely obsess over ultimate microscopic dissection, but return to the core path of macroscopic homeostasis, systematic conduction, and holistic regulation. This paper further proposes a new medical framework that integrates microscopic precise intervention with macroscopic systematic regulation, providing a theoretical basis and directional guidance for intelligent precision medicine, integrative medicine, and future health systems.

Keywords: Life Conduction System; Energy Homeostasis; Holistic Regulation; Precision Medicine; Unified Theory of Cosmic Matter; Essence of Disease

1 Introduction

Contemporary medicine has developed rapidly toward miniaturization and precision. Gene sequencing, targeted drugs, cell therapy, radiomics, and artificial intelligence

diagnosis have promoted diagnosis and treatment to the millimeter–micrometer–nanometer–molecular level. However, extensive clinical practice shows that normal indicators $\neq$ health, lesion elimination $\neq$ radical cure. Hypertension, diabetes, obesity, endocrine disorders, gastrointestinal dysfunction, chronic inflammation, nodules, and high-risk tumor conditions often present the characteristics of “local controllability, overall irreversibility, and long-term recurrence”.

The root cause lies in the fact that modern medicine deconstructs, localizes, and targets the human body, ignoring that life is a continuous, unified, and dynamic matter–energy–information conduction system.

Based on the Unified Theory of Cosmic Matter, this paper proposes:

1. Life is an advanced form of cosmic matter evolution and follows the unified laws of matter operation.
2. The essence of human health is smooth conduction, balanced energy, and self-sustaining homeostasis.
3. Disease is the manifestation of blocked conduction, unbalanced energy, and disrupted homeostasis in weak parts.
4. The ultimate direction of medicine is not “infinite microscopic dissection”, but restoring the homeostasis of the whole system.

This paper constitutes the core supporting paper of the author’s unified theoretical system in the medical field, which can be mutually confirmed with achievements in intelligent medicine, life energy homeostasis, and unified energy field formulas.

2 Core Logic: The Logical Boundary of Observation and Cognitive Misconceptions in Medicine

2.1 The Paradox of Homology Between Observation Tools and Observed Objects

All scientific instruments are composed of cosmic matter. When used to detect matter structures, there is a fundamental logical closed loop:

An observation tool composed of the researched object cannot ultimately observe the origin of the researched object.

Just as the eye cannot directly observe the constituent units of the eyeball, and the brain cannot directly analyze the smallest unit of consciousness.

This logic indicates:

- Human beings can continuously improve observation accuracy, but can never directly verify the “minimum cosmic matter unit” logically.
- If medicine infinitely pursues “smaller units, finer targets, and ultimate dissection”, it

will inevitably fall into the dilemma of logical inaccessibility, diminishing returns, and loss of holistic view.

2.2 Cognitive Bias in Modern Medicine: Overemphasis on Locality, Neglect of Wholeness; Overemphasis on Intervention, Neglect of Homeostasis

The advantage of contemporary precision medicine lies in local positioning, rapid control, and emergency treatment, but its systematic limitations are also prominent:

1. It attributes disease to local target/cell/gene abnormalities, ignoring overall systemic imbalance.
2. It aims to eliminate lesions and control indicators, ignoring the restoration of human homeostasis.
3. It emphasizes external precise intervention and weakens the human body's self-repair, conduction, and regulation abilities.
4. It lacks a systematic radical cure plan for "functional diseases, metabolic diseases, psychosomatic diseases, and subhealth".

This paper holds that: Lesions are results, not causes; imbalance is the cause and the real target of medical treatment.

3 Theoretical Framework: Life Conduction System and Energy Homeostasis Theory

3.1 Definition of Life Conduction System

The human body is a continuous, connected, and dynamic life conduction system:

- Matter conduction: transportation and exchange of nutrients, water, electrolytes, and metabolic wastes
- Energy conduction: transformation and distribution of biological, chemical, mechanical, and thermal energy
- Information conduction: coordinated regulation of nerves, endocrine, immunity, and cellular signals
- Overall synergy: a unified network formed by circulation, respiration, digestion, nerve, endocrine, and immunity

Health = Smooth Conduction + Balanced Energy + Self-Sustaining Homeostasis

Disease = Blocked Conduction + Unbalanced Energy + Collapsed Homeostasis

3.2 The Essence of Disease: Manifestation of Overall Imbalance in Weak Links

Any local lesion (nodule, inflammation, hyperplasia, tumor, metabolic abnormality) follows the following laws:

1. First, overall energy and conduction imbalance occurs.
2. Then, systemic compensation is insufficient.
3. Finally, lesions appear in genetically weak, overloaded, or stress-injured areas.

Therefore:

- Only removing lesions and controlling indicators is treating the symptoms.
- Restoring conduction, balancing energy, and rebuilding homeostasis is treating the root cause.

3.3 First Principles of Medicine from the Perspective of Unified Theory

1. Principle of Unity: Life follows the unified laws of cosmic matter, and the human body cannot be mechanically divided.
2. Principle of Conduction: Life activities are based on continuous matter-energy-information conduction.
3. Principle of Homeostasis: Health centers on dynamic balance, self-regulation, and self-repair.
4. Principle of Logical Boundary: Observation and dissection have limits; medicine must take overall homeostasis as the ultimate destination.

4 Critical Integration (Not Negation) of Modern Precision Medicine

This paper does not oppose precision medicine, but points out its applicable boundaries and systematic shortcomings, and proposes an integrated upgrading path.

4.1 Advantages of Precision Medicine (Irreplaceable)

- First aid, trauma, severe infection, acute organ failure
- Early localization, surgery, and local control of tumors
- Microscopic identification of genetic diseases and rare diseases
- Precise quantification and dynamic monitoring of lesions

4.2 Shortcomings of Precision Medicine (Must Be Compensated)

- It cannot solve overall imbalance, so chronic diseases recur easily.
- Excessive intervention may weaken human homeostasis.
- It ignores macroscopic determinants such as lifestyle, emotion, rhythm, and environment.
- It faces the logical dilemma of “infinite dissection but unable to reach the origin”.

4.3 Integration Direction: Precise Intervention + Systematic Regulation = Future Medicine

Acute stage: treat the symptoms; precisely control lesions and crises

Chronic stage: treat the root cause; restore conduction, balance energy, and rebuild homeostasis

Preventive stage: maintain systemic homeostasis and block diseases at the source

5 New Medical System: Holistic Homeostasis-Oriented Intelligent Integrative Medicine

Based on the Life Conduction System Theory, this paper proposes a implementable new medical framework:

5.1 Diagnosis: Upgrade from “Target Identification” to “Systematic Evaluation”

- Microscopic: lesion location, function classification, risk stratification
- Macroscopic: energy state, conduction patency, immune homeostasis, rhythm state, lifestyle assessment
- Conclusion: find the root of imbalance, not just lesions

5.2 Treatment: Upgrade from “Targeted Elimination” to “Systematic Repair”

1. Precise intervention: quickly control dangerous lesions
2. Conduction dredging: improve circulation, metabolism, and neuroendocrine regulation
3. Energy balance: comprehensive management of nutrition, work-rest schedule, exercise, and emotion
4. Homeostasis reconstruction: activate human self-healing ability and prevent recurrence

5.3 Prevention: Upgrade from “Early Screening and Treatment” to “Homeostasis Maintenance”

Centering on homeostasis of the life conduction system, achieve the real superior doctor treating pre-disease.

6 Conclusion

1. From the perspective of the unified theory of cosmic matter and logical self-consistency: human beings cannot ultimately observe the minimum unit of matter with instruments composed of matter, so medicine should not infinitely obsess over ultimate microscopic dissection.
2. Life is a unified conduction system of matter-energy-information. The core of health is overall homeostasis, and disease is the external manifestation of conduction block and energy imbalance.
3. Modern precision medicine must be deeply integrated with holistic regulation, systematic medicine, lifestyle medicine, and intelligent health to break through the

treatment bottlenecks of chronic diseases, functional diseases, and psychosomatic diseases.

4. The direction of future medicine is: unification of microscopic precision and macroscopic homeostasis, with the ultimate goal of restoring the self-organization, self-regulation, and self-repair abilities of the life system.

This theory provides the underlying logic for intelligent precision medicine, unified medicine, and integrated health systems, and can form a complete scientific system with a series of achievements such as cosmic unified theory, quantum entanglement mechanism, unified energy field formula, origin of life, and consciousness mechanism.
